

# more extra dimensions

What if there is more than one extra dimension ?

one (compact) extra dimension:

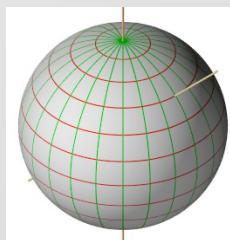

several (compact) extra dimensions:

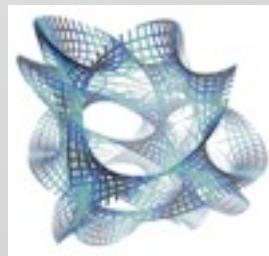

torus

or

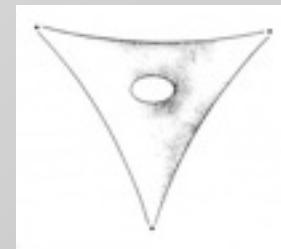

sphere

or

Calabi-Yau

or

orbifolds

or ....

higher-dimensional  
geometry

$$g_{\mu\nu} = \begin{array}{|c|c|c|c|c|c|c|c|c|} \hline & g_{00} & g_{01} & g_{02} & g_{03} & g_{04} & g_{05} & g_{06} & g_{07} \\ \hline g_{10} & g_{11} & g_{12} & g_{13} & g_{14} & g_{15} & g_{16} & g_{17} & \\ \hline g_{20} & g_{21} & g_{22} & g_{23} & g_{24} & g_{25} & g_{26} & g_{27} & \\ \hline g_{30} & g_{31} & g_{32} & g_{33} & g_{34} & g_{35} & g_{36} & g_{37} & \\ \hline \end{array} \quad \begin{array}{|c|c|c|c|c|c|c|c|c|} \hline & g_{40} & g_{41} & g_{42} & g_{43} & g_{44} & g_{45} & g_{46} & g_{47} \\ \hline g_{50} & g_{51} & g_{52} & g_{53} & g_{54} & g_{55} & g_{56} & g_{57} & \\ \hline g_{60} & g_{61} & g_{62} & g_{63} & g_{64} & g_{65} & g_{66} & g_{67} & \\ \hline g_{70} & g_{71} & g_{72} & g_{73} & g_{74} & g_{75} & g_{76} & g_{77} & \\ \hline \end{array}$$

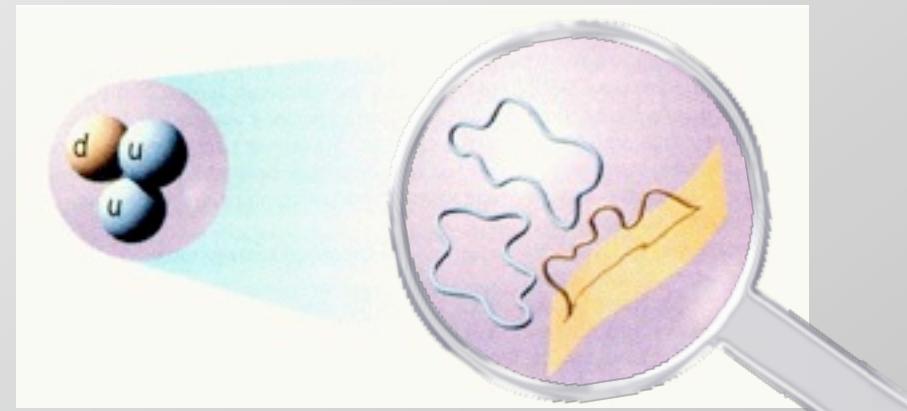

compactification

various particles  
& interactions  
e.g. weak, strong  
interactions

# string theory: unification of interactions

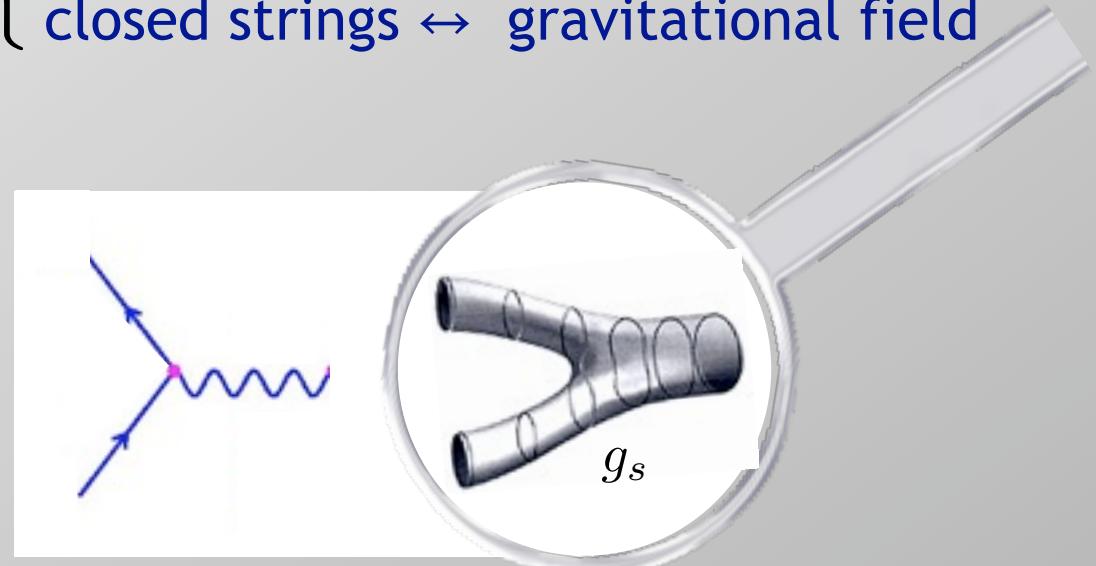

elementary objects are not point particles, but **extended strings**

particles  $\leftrightarrow$  string vibration modes

light degrees of freedom  $\left\{ \begin{array}{l} \text{open strings} \leftrightarrow \text{gauge fields} \\ \text{closed strings} \leftrightarrow \text{gravitational field} \end{array} \right.$

string interactions

# fundamental physics – particle interactions

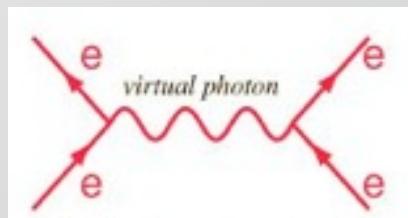

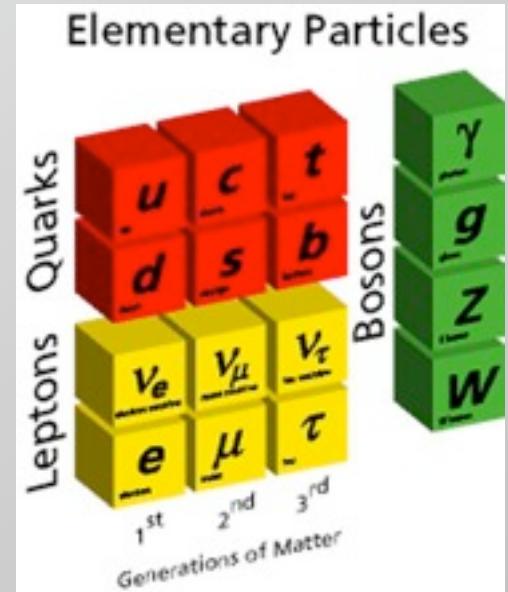

## standard model of particle physics

- ▶ physics at the microscopic scale  
origin and structure of matter

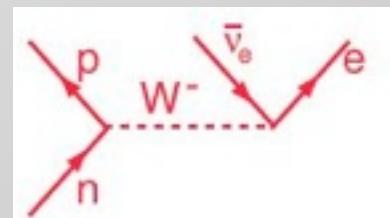

- ▶ quantum field theory (QED, Yang-Mills)  
describing the
  - constituents of matter (fermions)
  - fundamental interactions (bosons)

$$D^\mu F_{\mu\nu} = J_\nu$$

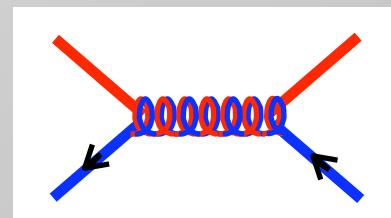

$$A_\mu = \begin{pmatrix} A_0 \\ A_1 \\ A_2 \\ A_3 \end{pmatrix}$$

electro: photon

weak: W, Z-boson

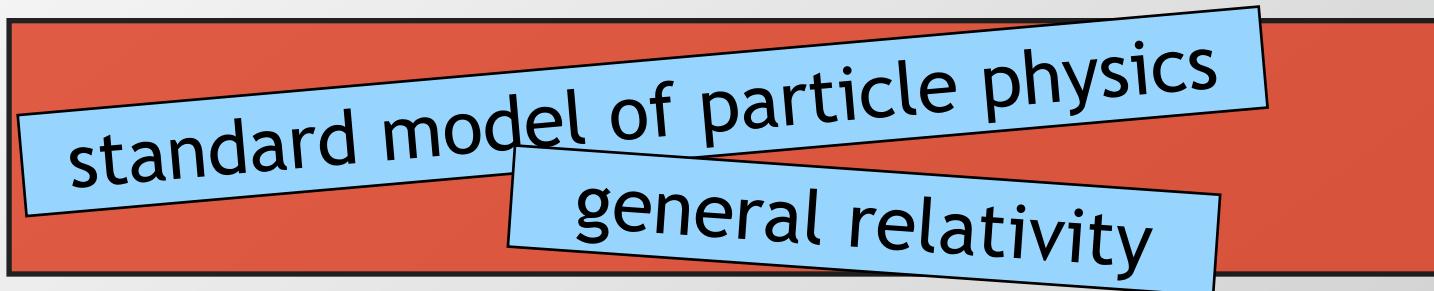

strong: gluon

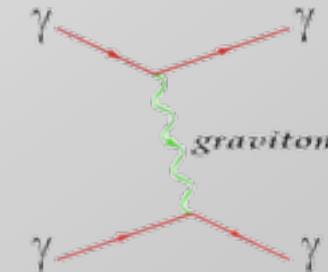

and gravity ..?

# fundamental physics — unification of interactions

---

- ▶ GR cannot be cast into standard quantum theory framework  
non-renormalizable as QFT (graviton is spin-2)

- ▶ standard model / general relativity  
considered as effective theories, valid on their respective scales

## → search for a fundamental theory

- ▶ contains GR / SM in the respective limits
- ▶ explanation of parameters: number of particles, masses, couplings, symmetries, cosmological constant, etc...

# Kaluza's fifth dimension

How does Einstein's general relativity look like,  
if the universe has five instead of four dimension ?

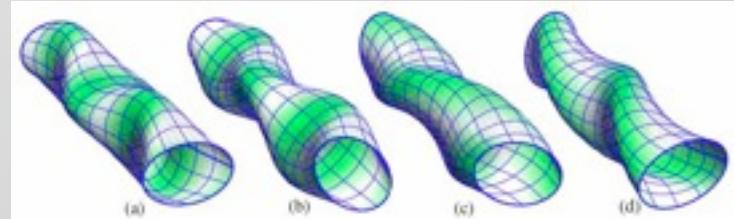

a 5-dimensional universe

Einstein gravity :

$$R_{\mu\nu} - \frac{1}{2} g_{\mu\nu} R = 0$$

now gravitational waves can propagate along the fifth dimension

describe a four-dimensional  
electromagnetic field !  
(T. Kaluza, 1921)

**INSTITUT DE FRANCE**  
**Académie des sciences**

$$R_{ik} = 0 \Omega$$
